

Build Young — Agent Harness (the loop)

Build Young — Agent Harness (the loop)

You write a spec → it becomes a task; then the loop drains it one at a time: pick & build → self-check → verify → risk gate → ship → record → next.

Canonical loop diagram (single source). Static exports are generated from it with every step revealed — docs/architecture/build-young-harness.png (full diagram) + build-young-harness.pdf (handout) — via `bash scripts/render-architecture.sh`.
